Wizzy-Techz is proud to announce that they will be offering after school sessions for years 3, 4, 5 and 6, sessions start at 15:15 and will run for 60 minutes (16:15 pickup)

Students will learn to design and build their own Minecraft items, blocks and MOBS, we also run a mobile Minecraft server allowing students to use their new ‘Mods’ in a safe and educational manner.
All new course for 2017, so even if your child has been to our other Minecraft courses they will still be learning new skills and programming techniques, also perfect for beginners.

This course is not about just playing Minecraft but how Minecraft has been created and how we can add our own features.

We shall be using our own programming studio where the students will be able to program and even draw their own MOBS and add them to Minecraft.

All lessons have been designed to follow the new computing national curriculum, also incorporating the entire STEM subjects (Science, Technology, Engineering and Mathematics).

Wizzy-Techz has been tailored to complement students learning within the school’s class room, we offer every student a fun and educational after school club, which is also entertaining and a great way to develop a wide range of new skills.
