There are a lot of different kinds of spider. Spiders can be very big or very small. Spiders are found in lots of different places. You could find them in a shed, a field or even in your bath. Spiders have got eight legs and have a body that has one big part and one small part. Spiders have very good eyes that can see all around them.

Super Spider Facts
You can find spiders in all of the different countries in the world, apart from ones where it snows a lot.

Different Types of Spider
The largest spider in the world is the Goliath bird-eating spider. They live in hot countries, up in trees and are the same size as a man’s hand. They don’t like to eat birds. They mostly eat worms and toads.

The smallest spider in the world is tiny. You can’t see it by just looking. You would have to use a magnifying glass to make it big enough to see.

Some More Amazing Spider Facts
• There are about 40 000 species of spider in the world.
• Even though most spiders are small, lots of people are scared of them.
• Most spiders don’t hurt people. Only a few are poisonous.

Spiders like to eat flies and other insects. They catch them in a web, which is a net that they make by using their silk and sticking it between things like branches or fence posts. It can take a long time for a spider to make a web so if you see it, don’t touch or break it. Look closely at the beautiful patterns they make.
Spiders can come in all shapes and sizes. Some are so small they can sit on the head of a pin; others are bigger than a grown man’s hand. Though people think they are insects like bees and wasps, they are in fact arachnids. This means they have eight legs and not six.

You can find spiders in all of the different countries in the world, apart from ones where it snows a lot.

Different Types of Spider
The largest spider in the world is the Goliath bird-eating spider. They are named after the famous giant in the Bible story of David and Goliath. They live in South America, in the rainforests. The name is a bit confusing, as they don’t actually eat birds. They mostly eat worms and toads.

The smallest spider in the world is the Samoan moss spider. They are about the same size as a full stop. Even though they are tiny, these spiders are still very poisonous but their fangs aren’t long enough to bite into a person’s skin.

Some More Amazing Spider Facts
• There are about 40 000 species of spider in the world.
• Fear of spiders is known as arachnophobia.
• Most spiders are completely harmless to people. Only a few species are venomous.

Nearly all spiders catch their food by spinning a web that acts like a trap. This web is made from very thin but very strong silk. When insects fly into it, they get stuck and the spiders can wrap them up in even more silk. Spiderwebs are very beautiful, made up of hundreds of small shapes, and can take a spider days to make.
