This week you are going to carry out a research project based on vehicles. By the end of the week you will have lots of information about a vehicle and you can share your information however you like. You may create a poster, a leaflet, an information sheet, a powerpoint, a verbal presentation.....or any other idea you may have!

Today you need to choose a vehicle that you would like to find out about it. It can be any vehicle you like, possibly cars, trains, helicopters, bicycles etc etc.

When you have chosen, you need to begin to find some information about your vehicle. You can research using books or the internet.

Today we would like you to research how your vehicle works. Write some notes (on your own or with a parent) giving some simple information about how your vehicle works. Also draw a picture, or print a picture, of your vehicle.

There is an example below.

Steam Train – How it works

A steam train has a firebox where coal is burnt. This fire then heats some water creating steam. The steam helps to push the wheels around.
