Dear Parents/Carers,

**RECYCLED GREENHOUSE PROJECT**

As you know, here at Newton Farm School we pride ourselves on being as eco-friendly as possible. The children are aware of this on a daily basis with recycling bins placed in every classroom around the school.

We currently have a Silver Geography award which we achieved through our work in school, the local community and our continuous support for our seed school in Africa.

Our aim this year is to achieve the Gold Geography award and to do this we have decided to create our very own **Recycled Greenhouse**. In order to make this possible we need 2 litre, washed and cleaned plastic drink bottles – and we need 1400 of them!

This project will enable the children to feel like they are giving back to the community, widening their understanding of where their food comes from and developing an awareness of the problems the world faces today, such as the amount of plastic in our oceans, and how we can help to reduce it now.

We are asking, if possible, for each family to help us by bringing in as many 2 litre washed and cleaned bottles by October half term, rather than putting them in your own recycling bins at home.

Thank you very much for your continued support

Miss G Barber  
Head of Geography
