Years 5/6

Mixed Age Schemes of Learning

White Rose Maths
Welcome

Welcome to the White Rose Maths’ new, more detailed schemes of learning for 2017-18.

We have listened to your feedback and as a result of this, we have made some changes to the previous WRMH primary schemes. *We believe the new schemes are bigger, bolder and more detailed than before.*

White Rose Maths’ new schemes still have the *same look and feel* as the old WRMH ones, but we have tried to provide more detailed guidance. We have worked with enthusiastic and passionate teachers from up and down the country, who are experts in their particular year group, to bring you additional guidance. *These schemes have been written for teachers, by teachers.*

We hope we can help make a difference to maths education in this country. *We all believe that every child can succeed in mathematics.* Thank you to everyone who has contributed to our work. It is only with your help that we can make a difference.

We hope that you find the new schemes of learning helpful. As always, if you or your school want support with any aspect of teaching maths please do not hesitate to get in touch.

If you have any feedback on any part of our work, do not hesitate to get in touch. Follow us on Twitter and Facebook to keep up-to-date with all our latest announcements.

**White Rose Maths Team**

#MathsEveryoneCan
What's New?

This release of our schemes includes:

- New overviews, with subtle changes being made to the timings and the order of topics.
- New small steps progression. These show our blocks broken down into smaller steps.
- Small steps guidance. For each small step we provide some brief guidance to help teachers understand the key discussion and teaching points. This guidance has been written for teachers, by teachers.
- A more integrated approach to fluency, reasoning and problem solving.
- Answers to all the problems in our new scheme.
- This year there will also be updated assessments.
- We are also working with Diagnostic Questions to provide questions for every single objective of the National Curriculum.
Meet the Team

The schemes have been put together by a wide group of passionate and enthusiastic classroom practitioners. The development of the schemes has been led by the following people who work across Trinity MAT.

Kelsey Brown
Beth Smith
Caroline Hamilton
Stephen Monaghan
Julie Matthews
Jenny Lewis
Special Thanks

The WRM Team would like to say a huge thank you to the following people who came from all over the country to contribute their ideas and experience. We could not have done it without you.

**Year 2 Team**
Chris Gordon
Beth Prottey
Rachel Wademan
Emma Hawkins
Scott Smith
Valda Varadinek-Skelton
Chloe Hall
Faye Hirst
Charlotte James
Joanne Stuart
Michelle Cornwell

**Year 3 Team**
Becky Stanley
Nicola Butler
Laura Collis
Richard Miller
Claire Bennett
Chris Conway

**Year 4 Team**
Terrie Litherland
Susanne White
Hannah Kirman
Daniel Ballard
Isobel Gabanski
Laura Stubbs

**Year 5 Team**
Lynne Armstrong
Laura Heath
Clare Bolton
Helen Eddie
Chris Dunn
Rebecca Gascoigne

**Year 6 Team**
Lindsay Coates
Kayleigh Parkes
Shahir Khan
Sarah Howlett
Emma Lucas
How to use the Small Steps

We are regularly asked how it is possible to spend so long on particular blocks of content and National Curriculum objectives. We know that breaking the curriculum down into small manageable steps should help children understand concepts better. Too often, we have noticed that teachers will try and cover too many concepts at once and this can lead to cognitive overload. In our opinion, it is better to follow a small steps approach.

As a result, for each block of content we have provided a “Small Step” breakdown. We recommend that the steps are taught separately and would encourage teachers to spend more time on particular steps if they feel it is necessary. Flexibility has been built into the scheme to allow this to happen.

Teaching Notes

Alongside the small steps breakdown, we have provided teachers with some brief notes and guidance to help enhance their teaching of the topic. The “Mathematical Talk” section provides questions to encourage mathematical thinking and reasoning, to dig deeper into concepts.

We have also continued to provide guidance on what varied fluency, reasoning and problem solving should look like.
Assessments

Alongside these overviews, our aim is to provide an assessment for each term’s plan. Each assessment will be made up of two parts:

**Part 1:** Fluency based arithmetic practice  
**Part 2:** Reasoning and problem solving based questions

Teachers can use these assessments to determine gaps in children’s knowledge and use them to plan support and intervention strategies.

The assessments have been designed with new KS1 and KS2 SATs in mind. **New assessments will be released over the course of next year.**

For each assessment we will aim to provide a summary spreadsheet so that schools can analyse their own data. We hope to work with Mathematics Mastery to allow schools to make comparisons against other schools. Keep a look out for information next year.
Teaching for Mastery

These overviews are designed to support a mastery approach to teaching and learning and have been designed to support the aims and objectives of the new National Curriculum.

The overviews:

• have number at their heart. A large proportion of time is spent reinforcing number to build competency
• ensure teachers stay in the required key stage and support the ideal of depth before breadth.
• ensure students have the opportunity to stay together as they work through the schemes as a whole group
• provide plenty of opportunities to build reasoning and problem solving elements into the curriculum.

For more guidance on teaching for mastery, visit the NCETM website
https://www.ncetm.org.uk/resources/47230

Concrete – Pictorial - Abstract

As an organisation we believe that all children, when introduced to a new concept, should have the opportunity to build competency by taking this approach.

Concrete – children should have the opportunity to use concrete objects and manipulatives to help them understand what they are doing.

Pictorial – alongside this children should use pictorial representations. These representations can then be used to help reason and solve problems.

Abstract – both concrete and pictorial representations should support children’s understanding of abstract methods.

We have produced a CPD unit for teachers in schools;
https://www.tes.com/teaching-resource/the-importance-of-concrete-professional-development-11476476
Additional Materials

In addition to our schemes and assessments there are a range of other materials that you may find useful.

**KS1 and KS2 Problem Solving Questions**
For the last two years WRMH have provided a range of KS1 and KS2 problem solving questions in the run up to SATs. There are over 150 questions on a variety of different topics and year groups.

**Other schemes of learning**
As well as having schemes for Y1-Y6 we developed a range of other schemes of learning

- Schemes for reception
- Mixed aged schemes
- Year 7 – 9 schemes for secondary

**Calculation policy/guidance**
We also have our calculation policy for the four operations. This can be found on our TES page.
Our Partnerships

tes
www.tes.com

Over the last 12 months we have developed a partnership with tes. Working with Mathematics Mastery we have created a detailed breakdown of the National Curriculum. Watch this space for exciting developments.
https://www.tes.com/teaching-resources/teaching-for-mastery-in-primary-maths

Diagnostic Questions
www.diagnosticquestions.co.uk

From September 2017, we have written two sets of questions for every National Curriculum objective from Y1 to Y6. These are hosted free of charge on @mrbartonmaths Diagnostic Questions website.
Training

White Rose Maths offers paid for training to schools regionally, nationally and internationally. Over the last year we have delivered training to over 150 schools and have had over 1,000 people attend our face to face training.

As part of our ‘Jigsaw’ package we offer the following twilight courses:

- CPA
- Bar Modelling
- Reasoning and Problem Solving
- Mathematical Talk and Questioning
- Variation and Depth

If you would like any more information about our courses then email the team.

License Partners

We also work with a growing number of Teaching Schools around the country to deliver our training. All of our providers have been specially selected and they are as passionate about improving maths education as we are. All our providers offer our twilight bar modelling training course. If you want to see who your local provider is or would like to become a license partner then please get in touch.

Bar Modelling Deeper Learning Event
FAQs

We have bought one of the new textbook schemes, can we still use these curriculum plans?

Many schools are starting to make use of mastery textbooks used in places like Singapore and China. The schemes have been designed to work alongside these textbooks. We recommend that you follow the textbook order and use our materials for additional support and guidance.

If we spend so much time on number work, how can we cover the rest of the curriculum?

Children who have an excellent grasp of number make better mathematicians. Spending longer on mastering key topics will build a child’s confidence and help secure understanding. This should mean that less time will need to be spent on other topics.

In addition, schools that have been using these schemes already have used other subjects and topic time to teach and consolidate other areas of the mathematics curriculum.

Should I teach one small step per lesson?

Each small step should be seen as a separate concept that needs teaching. You may find that you need to spend more time on particular concepts. Flexibility has been built into the curriculum model to allow this to happen. This may involve spending more than one lesson on a small step, depending on your class’ understanding.

Will you be providing grade boundaries for your assessments?

No, we will not be releasing guidance on grade boundaries. We suggest the assessments are used to find out what children can and cannot do, which will help inform future planning.
FAQs continued …

How do I use the fluency, reasoning and problem solving questions?

The questions are designed to be used by the teacher to help them understand the key teaching points that need to be covered. They should be used as inspiration and ideas to help teachers plan carefully structured lessons.

What is same day intervention?

A growing number of schools are doing different types of same day intervention. Some schools are splitting a lesson into two parts and other schools are working with small groups of students at other times during the day. The common goal is to keep up, rather than catch up.

How do I reinforce what children already know if I don’t teach the topic again?

The scheme has been designed to give sufficient time for teachers to explore concepts in depth, rather than covering it superficially and then coming back to it several times.

We understand though that schools will rightly want to ensure that students revisit concepts and ensure fluency in number.

The schemes interleave prior content in new concepts. For example when children look at measurement we recommend that there are lots of questions that practice the four operations and fractions. This helps children make links between topics and understand them more deeply.

We also recommend that schools look to reinforce number fluency throughout the year. This could be done as mental and oral starters or in additional maths time during the day.

#MathsEveryoneCan

At White Rose Maths we believe that everyone can succeed in Maths. We encourage anyone who uses our schemes to share in this belief and do all that they can to convince the children they teach that this is the case.

<td><strong>Number – Place Value</strong>&lt;br&gt;Read, write, order and compare numbers to at least 1000000 and determine the value of each digit. Read, write, order and compare numbers up to 10,000,000 and determine the value of each digit. Count forwards or backwards in steps of powers of 10 for any given number up to 1000000. Interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers including through zero. <strong>Use negative numbers in context, and calculate intervals across zero.</strong>&lt;br&gt;Round any number up to 100000 to the nearest 10, 100, 1000, 10000 and 100000 Round any whole number to a required degree of accuracy. Solve number problems and practical problems that involve all of the above. <strong>Solve number and practical problems that involve all of the above.</strong> Read Roman numerals to 1000 (M) and recognise years written in Roman numerals.</td>
<td><strong>Number – multiplication and division</strong>&lt;br&gt;Multiply and divide numbers mentally drawing upon known facts. Multiply and divide whole numbers by 10, 100 and 1000. Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers. Identify common factors, common multiples and prime numbers. Multiply numbers up to 4 digits by a one or two digit number using a formal written method, including long multiplication for 2 digit numbers. Multiply multi-digit number up to 4 digits by a 2-digit number using the formal written method of long multiplication. Divide numbers up to 4 digits by a one digit number using the formal written method of long division, and interpret remainders as whole numbers, fractions, or by rounding as appropriate for the context. Divide numbers up to 4 digits by a 2-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding as appropriate for the context. Divide numbers up to 4 digits by a 2-digit number using the formal written method of long multiplication, interpreting remainders according to the context. Use their knowledge of the order of operations to carry out calculations involving the four operations. Solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the use of the equals sign. Solve problems involving addition, subtraction, multiplication and division.</td>
<td><strong>Statistics</strong>&lt;br&gt;Solve comparison, sum and difference problems using information presented in a line graph. Interpret and construct pie charts and line graphs and use these to solve problems. Complete, read and interpret information in tables including timetables. Illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius. Calculate the mean as an average.</td>
<td><strong>Measurement: Perimeter, Area and Volume</strong>&lt;br&gt;Measure and calculate the perimeter of composite rectilinear shapes in cm and m. Calculate and compare the area of rectangles (including squares), and including using standard units, cm², m² estimate the area of irregular shapes. Recognise that shapes with the same areas can have different perimeters and vice versa. Recognise when it is possible to use formulae for area and volume of shapes. Calculate the area of parallelograms and triangles. Estimate volume [for example using 1cm³ blocks to build cuboids (including cubes)] and capacity [for example, using water] Calculate, estimate and compare volume of cubes and cuboids using standard units, including cm³, m³ and extending to other units (mm³, km³)</td>

**Measurement - converting units**

Convert between different units of metric measure [for example, km and m; cm and m; cm and mm; g and kg; l and ml]

Use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to 3dp.

Understand and use approximate equivalences between metric units and common imperial units such as inches, pounds and pints.

Convert between miles and kilometres.

Solve problems involving converting between units of time. Use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.

**Geometry - position and direction**

Identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed.

Describe positions on the full coordinate grid (all four quadrants).

Draw and translate simple shapes on the coordinate plane, and reflect them in the axes.

**Geometry - Properties of Shapes and Angles**

Identify 3D shapes, including cubes and other cuboids, from 2D representations.

Use the properties of rectangles to deduce related facts and find missing lengths and angles.

Distinguish between regular and irregular polygons based on reasoning about equal sides and angles.

**Compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals and regular polygons.**

Know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles.

Draw given angles, and measure them in degrees (°)

Draw 2-D shapes using given dimensions and angles.

Identify: angles at a point and one whole turn (total 360°), angles at a point on a straight line and ¼ a turn (total 180°) other multiples of 90°

Recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles.

**Investigations**

**Roman Numerals**

**Notes and Guidance**

Building on their Y4 knowledge of Roman Numerals to 100, children explore Roman Numerals to 1,000. They explore what is the same and what is different between the number systems, for example there is no zero.

Teachers could introduce writing the date in Roman Numerals to revise the concept on a daily basis.

**Mathematical Talk**

Why is there no zero in the Roman Numerals? What might it look like?

Do you notice any patterns? Look at 30 and 300.

How can you check you have represented the Roman Numerals correctly?

**Varied Fluency**

1. **Lollipop stick activity.**
   The teacher shouts out a number and the children make it with lollipop sticks.
   Children could also do this in pairs or groups, and for a bit of fun they could test the teacher!

2. **Each diagram shows a number in numerals, words and Roman Numerals.**

   - **500**
     - Five hundred
   - **CCCII**
   - **1,000**

   Complete the diagrams.

3. **Complete the function machines.**

   - **CCC** → **+10** → 
   - **-1** → **DCLXXV**
Solve

Possible answers:
CD + C = D
M ÷ II = D
C + CC + CC = D
C × V = D

How many calculations, using Roman Numerals, can you write to get the same total?

Here is part of a Roman Numeral hundred square.

Complete the missing values.

What patterns do you notice?
Numbers to 10,000

Notes and Guidance

Children use concrete manipulatives and pictorial diagrams to recap representing numbers up to 10,000.

Within this step, ensure children revise adding and subtracting 10, 100 and 1,000, and discuss what is happening to the place value columns.

Mathematical Talk

Show me 8,045 in three different ways.

Do you prefer to use concrete objects or draw an image pictorially? Why?

Make 1,500 and explain why you chose to make it this way (use this to see what concrete objects children choose to use).

Varied Fluency

1. Match the diagram to the number.

   ![Diagram](image)

   - 4,005
   - 4,500
   - 4,050

2. Which diagram is the odd one out?

   ![Diagram](image)

3. Complete the table.

<table>

</tbody>
</table>
Harriet has made five numbers, using the digits 1, 2, 3 and 4. She has changed each number into a letter.

Her numbers are:

1) aabdc
2) acdbc
3) dcaba
4) cdadc
5) bdaab

Here are three clues to work out her numbers:

- Number 1 is the greatest number.
- The digits in number 4 total 12.
- Number 3 is the smallest number.

Simon says he can order the following numbers by only looking at the first three digits.

He is incorrect because two of the numbers start with twelve thousand, five hundred therefore you need to look at the tens to compare and order.
Children need to read, write and represent numbers to ten million in different ways.

Numbers do not always have to be in the millions – children need to see a mixture of smaller and larger numbers.

What does a zero in a number represent?

What strategy do you use to work out the divisions on a number line?

How many ways can you complete the partitioned number?

Match the representation to the numbers in digits.

1. One million, four hundred and one thousand, three hundred and twelve

2. Complete the missing numbers.
   - $6,305,400 = \underline{\hspace{2cm}} + 300,000 + \underline{\hspace{2cm}} + 400$
   - $7,001,001 = 7,000,000 + \underline{\hspace{2cm}} + \underline{\hspace{2cm}}$
   - $42,550 = \underline{\hspace{1cm}} + \underline{\hspace{1cm}} + \underline{\hspace{1cm}}$

3. Husna's number is 306,042
   She adds 5,000 to her number.
   What is her new number?
Put a digit in the missing space below to make the sentence correct.

\[4,62\_\_645 < 4,623,64\_]\\

Is there more than one option? Can you find them all?

Miley has this number:
824,650

She takes forty thousand away.
Her answer is 820,650
Is this correct?
Explain how you know.

<table>
<thead>
<tr>
<th>1st digit could be 0, 1, 2</th>
<th>2nd digit could be 6, 7, 8, 9</th>
</tr>
</thead>
<tbody>
<tr>
<td>When 1st digit is 3, 2nd digit must be 6 or above</td>
<td></td>
</tr>
<tr>
<td>When 2nd digit is 5, 1st digit must be 0, 1 or 2</td>
<td></td>
</tr>
</tbody>
</table>

Use the digit cards and statements to work out my number.

\[0 3 3 5 5 6 7\]

- The ten thousands and hundreds have the same digit.
- The hundred thousand digit is double the tens digit.
- It is a six-digit number.
- It is less than six hundred and fifty five thousand.

Is this the only option?

Possible options
653,537
650,537
650,533
Numbers to 100,000

Notes and Guidance

Children focus on numbers up to 100,000. They represent numbers on a place value grid, read and write numbers and place them on a number line to 100,000.

Using a number line, they find numbers between two points, place a number and estimate where larger numbers will be.

Mathematical Talk

How can we estimate a number on a number line if there are no divisions?

How many digits change when you add 10, 100 or 1000?

Do you need to count forwards and backwards to find out if a number is in a number sequence? Explain.

Variied Fluency

1. A number is shown in the place value chart.

<table>
<thead>
<tr>
<th>10,000s</th>
<th>1,000s</th>
<th>100s</th>
<th>10s</th>
<th>1s</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Write the number in figures and in words.

- Ashy adds 10 to this number
- Zack adds 100 to this number
- Isobel adds 1,000 to this number

Write each of their new numbers in figures and in words.

2. Complete the grid to show the same number in different ways.

<table>
<thead>
<tr>
<th>Counters</th>
<th>Part whole model</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bar model</td>
<td>Number line</td>
</tr>
</tbody>
</table>

3. Complete the missing numbers.

59,000 = 50,000 + .................

................. = 30,000 + 1,700 + 230

75,480 = ............. + 300 + .............
Here is a number line.

What is the value of A?

B is 40 less than A.

What is the value of B?

C is 500 less than B.

Add C to the number line.

Here are three ways of partitioning 27,650

27 thousands, 650 ones
27 thousands, 5 hundreds and 150 ones
27 thousands and 65 tens

Write three more ways

Jennie counts forwards and backwards in 10s from 317

Circle the numbers Jennie will count.

427  997  507
1,666  3,210  5,627
-23  7  -3

Possible answers:
27 thousands, 6 hundreds and 5 tens
27 thousands, 7 thousands and 650 ones
20 thousands, 7 thousands and 650 ones

Explain why Jennie will not say the other numbers.

Any positive number will always have to end in a 7
Any negative number will always have to end in a 3
Children read, write and represent numbers to 1,000,000.

Children need to see numbers represented with counters on a place value grid, as well as drawing the counters.

If one million is the whole, what could the parts be?

Show me 800,500 in three different ways.

Where do the commas go in the numbers?

How else can the numbers be represented?

Katya has the following number.

She adds 4 counters to the hundreds column. What is her new number?
Show the value of the digit 7 in each of these numbers.

407,338: the value is 7 thousand. It is to the left of the hundreds column.

7,100,491: the value is 7 million. It is a 7-digit number and it is on the far left. This is where the millions column is.

25,571: the value is 7 tens. It is second from the right, next to the ones column.

The bar models are showing a pattern.

Draw the next three.

Create your own pattern of bar models for a partner to continue.
Children complete number sequences and can describe the term to term rule in a sequence e.g. add ten each time.

They count forwards and backwards in powers of ten up to 1,000,000

What happens to the pattern when you move into negative?

What do you notice to the pattern when you compare sequences in 10's, 100's 1000's etc?

Can you create a rule for the sequence?

Give children a target number to make then let them choose a card. Children then need to adjust their number on the Gattegno chart.

Week 1 to 3 – Number: Place Value

Count in Powers of 10

Notes and Guidance

Varied Fluency

1. Complete the sequence.

......, ......, 2, ......, 22, ......, 32, ......, ......, 62

The rule for this sequence is:

2. Circle and correct the mistake in each sequence.

7,875, 8,875, 9,875, 11,875, 12,875, 13,875.....

864,664, 764,664, 664,664, 554,664, 444,664...

Here is a Gattegno chart showing 32, 450

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>20</td>
<td>30</td>
<td>40</td>
<td>50</td>
<td>60</td>
<td>70</td>
<td>80</td>
<td>90</td>
<td></td>
</tr>
<tr>
<td>100</td>
<td>200</td>
<td>300</td>
<td>400</td>
<td>500</td>
<td>600</td>
<td>700</td>
<td>800</td>
<td>900</td>

<td>7000</td>
<td>8000</td>
<td>9000</td>
<td></td>
</tr>
<tr>
<td>10000</td>
<td>20000</td>
<td>30000</td>
<td>40000</td>
<td>50000</td>
<td>60000</td>
<td>70000</td>
<td>80000</td>
<td>90000</td>
<td></td>
</tr>
</tbody>
</table>

Cards

+10 +100 +1000 +10000

-10 -100 -1000 -10000

Children complete number sequences and can describe the term to term rule in a sequence e.g. add ten each time.

Mathematical Talk

What do you notice to the pattern when you compare sequences in 10's, 100's 1000's etc?

Can you create a rule for the sequence?
Daniel writes the first five numbers of a sequence.

They are 3,666, 4,666, 5,666, 6,666, 7,666

The 10th term will be 15,332 because I will double the 5th term.

Is he correct? Explain why.

The answer would be 12,666 because it is adding 1,000 each time.
He should have added 5,000 not double the 5th term.

One person has made a mistake.
Identify who has made the mistake and explain how you know.
Compare and Order

Notes and Guidance

Building on their learning from Year 4 children will compare and order numbers up to 100,000.

Children should be able to do this with numbers presented in a variety of ways.

Mathematical Talk

In order to compare numbers, what do we need to know?

What is the value of each digit?

What is the value of _____ in this number?

What is the value of the whole? Can you suggest other parts that make the whole?

Can you write a story to support your part whole model?

Varied Fluency

1. Order the following.

2. Add the symbols <, > and = to make the statements correct.

3. Use 6 counters to make five different 6 digit numbers.

Order your numbers from greatest to smallest.
### Year 5 | Autumn Term

#### Compare and Order

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Turn over digit cards 0-9 and select five.</th>
<th>Totally dependent on what cards are chosen e.g. 4, 9, 1, 3, 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Make the greatest number possible and the smallest number possible.</td>
<td>Smallest: 12,349  Greatest: 94,321</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Using digit cards 0-9, create three different five-digit numbers that fit the following clues:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The digit in the hundreds column and ones column has a difference of 2</td>
</tr>
<tr>
<td>• The digit in the hundreds column and the ten thousands column has a difference of 2</td>
</tr>
<tr>
<td>• The sum of all the digits totals 19</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Possible answers:</th>
</tr>
</thead>
<tbody>
<tr>
<td>81,604</td>
</tr>
<tr>
<td>41,608</td>
</tr>
<tr>
<td>58,321</td>
</tr>
<tr>
<td>18,325</td>
</tr>
</tbody>
</table>
Children will compare and order numbers up to ten million using numbers presented in different formats.

Children will use greater than and less than vocabulary, and the inequality symbols.

What is the value of each digit?
What is the value of _____ in this number?
What is the value of the whole? Can you suggest other parts that make the whole?
Can you write a story to support your part whole model?

A house costs £250,000.
A motorised home costs £100,000.
A bungalow is priced half way between the two. Work out the price of the bungalow.
Lola has ordered eight 6-digit numbers.
The smallest number is 345,900
The greatest number is 347,000
All the other numbers have digit totals of 20 and have no repeating digits.
What are the other six numbers?
Can you order all eight numbers from smallest to greatest?

Kayleigh draws bar model A. Her teacher asks her to draw another where the total is 30,000

Bar B is inaccurate because it starts after 10,000 and finishes after 50,000 Therefore it is longer than 40,000 30,000 < 40,000
Compare and Order

Notes and Guidance

Children compare and order numbers up to 1,000,000 using comparison vocabulary and symbols.

They use a number line to compare numbers, and look at the importance of focusing on the column with the highest place value when comparing numbers.

Mathematical Talk

In order to compare what do we need to know?

What is the value of each digit?

What is the value of  in this number?

What is the value of the whole? Can you suggest other parts that make the whole?

Can you write a story to support your part whole model?

Varied Fluency

1. Put the number cards in order of size.

   13,010  13,100  13,011  13,110  13,111

2. Estimate the value of A, B and C.

   A  B  C

3. Here is a table showing the population in areas of Yorkshire.

<table>
<thead>
<tr>
<th>Area</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>Halifax</td>
<td>88,134</td>
</tr>
<tr>
<td>Brighouse</td>
<td>32,360</td>
</tr>
<tr>
<td>Leeds</td>
<td>720,492</td>
</tr>
<tr>
<td>Huddersfield</td>
<td>146,234</td>
</tr>
<tr>
<td>Wakefield</td>
<td>76,886</td>
</tr>
<tr>
<td>Bradford</td>
<td>531,200</td>
</tr>
</tbody>
</table>

Add <, > or = to make the statements correct.

The population of Halifax is  than the population of Wakefield.
Double the population of Brighouse is  than the population of Halifax.
The number covered by the splat is an odd number.

When rounded to the nearest 10,000 it is 440,000

The sum of the digits is 23

Possible answers:
444,812
435,812
439,502

Here are four number cards.

42,350  43,385
56,995  56,963

Four children take one each and say a clue.

Max: My number is 57,000 when rounded to the nearest 100

Ella: My number has exactly three hundreds in it

Henry: My number is 44,000 when rounded to the nearest thousand

Kyra: My number is exactly 100 less than 57,043

Which card did each child have?

Max: 56,995
Ella: 42,350
Henry: 43,385
Kyra: 56,963
Round to 10, 100, 1,000

Notes and Guidance

Children build on their Year 4 knowledge of rounding to 10, 100 and 1,000. They need to experience rounding up to and within 10,000.

They need to understand that the column from the question and the column to the right of it are used e.g. round 1,450 to the nearest hundred – look at the hundred and tens column.

Mathematical Talk

Which place value column do we need to look at when we round the nearest 1,000?

When is it best to round to 10? 100? 1,000?
Can you give an example of this?
Can you justify your reasoning?

Is there more than one solution?
Will the answers to the nearest 100 and 1,000 be the same or different for the different start numbers?

Varied Fluency

1. Complete the table.

<table>
<thead>
<tr>
<th>Start number</th>
<th>Rounded to the nearest 10</th>
<th>Rounded to the nearest 100</th>
<th>Rounded to the nearest 1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>365</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1,242</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4,770</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

DCCLXIX

2. For each number, find five numbers that round to it when rounding to the nearest 100

3. Complete the table.

<table>
<thead>
<tr>
<th>Start number</th>
<th>Nearest 10</th>
<th>Nearest 100</th>
<th>Nearest 1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>365</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1,242</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4,770</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Round to 10, 100, 1,000

### Reasoning and Problem Solving

**Nathan**
- My number rounded to the nearest 10 is **1,150**
- Rounded to the nearest 100 it is **1,200**
- Rounded to the nearest 1,000 it is **1,000**

**What could Nathan’s number be?**

**Can you find all of the possibilities?**

<table>
<thead>
<tr>
<th>Nathan</th>
<th>Alya</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,150</td>
<td>I do not agree with Alya because 2,567 rounded to the nearest 100 is 2,600. I know this because the rule of a tens ending in 5, 6, 7, 8 and 9 round up.</td>
</tr>
<tr>
<td>1,151</td>
<td></td>
</tr>
<tr>
<td>1,152</td>
<td></td>
</tr>
<tr>
<td>1,153</td>
<td></td>
</tr>
<tr>
<td>1,154</td>
<td></td>
</tr>
</tbody>
</table>

2,567 to the nearest 100 is **2,500**

**Do you agree with Alya?**

**Explain why.**

**Regan**
- 4,725 to the nearest 1,000 is **5,025**

**Explain the mistake Regan has made.**

Regan has correctly changed four thousand to five thousand but has added the tens and ones back on. When rounded to the nearest thousand, the hundreds, tens and ones will be zeros.
Rounding Numbers

Notes and Guidance

Children build on previous work on rounding. They need to experience rounding up to and within ten million.

Children use their knowledge of multiples to work out which two numbers the number they are rounding sits between.

Mathematical Talk

What are the ‘rules’ we use when rounding?

Which place value column do we need to look at when we round the nearest 100,000?

When is it best to round to 1,000? 10,000? Can you justify your reasoning?

Varied Fluency

1. Round the number in the place value chart to:
   - The nearest 10,000
   - The nearest 100,000
   - The nearest 1,000,000

2. Write five numbers that round to the following numbers when rounding to the nearest hundred thousand.
   - 200,000
   - 600,000
   - 1,900,000

3. Complete the missing digits so that each number rounds to one hundred and thirty thousand when rounded to the nearest ten thousand.
   - 12[ ], 657
   - 1[ ], 999
   - 13[ ], 001
Both numbers are whole numbers.

What is the greatest possible difference between the two numbers?

The greatest possible difference is 104 because:

\[ 1,449 - 1,345 = 104 \]

Kiera rounded 2,215,678 to the nearest million and wrote 2,215,000.

Can you explain to Kiera what mistake she has made and why she has done it?

She has rounded it to the nearest million correctly. However, digits in the other columns should all be zero.

Miss Grogan gives out the following four cards: 15,987, 15,813, 15,101, 16,101.

Four children each take a card and give a clue to what their number is:

Marc says, “My number rounds to 16,000 when rounded to the nearest 1,000”

Daryl says, “My number has one hundred.”

Tom says, “My number is 15,990 when rounded to the nearest 10”

Adam says, “My number is 15,000 rounded to the nearest 1,000”

Can you work out which child has which card? Explain your choices.

Tom has 15,987
Marc has 15,813
Adam has 15,101
Daryl has 16,101
Children continue with work on rounding, now using numbers up to 100,000. They round to the nearest 10, 100, 1,000 and 10,000.

Children use their knowledge of multiples to work out which two numbers the number they are rounding sits between.

**Mathematical Talk**

Which place value column do we need to look at when we round the nearest 1000?

When is it best to round to 10? 100? 1,000? Can you give an example of this? Can you justify your reasoning?

**Varied Fluency**

1. Round 85,617
   - To the nearest 10
   - To the nearest 100
   - To the nearest 1,000
   - To the nearest 10,000

2. Round the distances to the nearest 1,000 miles.

<table>
<thead>
<tr>
<th>Destination</th>
<th>Miles from Manchester airport</th>
<th>Miles to the nearest 1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>New York</td>
<td>3,334</td>
<td></td>
</tr>
<tr>
<td>Sydney</td>
<td>10,562</td>
<td></td>
</tr>
<tr>
<td>Hong Kong</td>
<td>5,979</td>
<td></td>
</tr>
<tr>
<td>New Zealand</td>
<td>11,550</td>
<td></td>
</tr>
</tbody>
</table>

3. Complete the table.

<table>
<thead>
<tr>
<th>Rounded to the nearest 100</th>
<th>Start number</th>
<th>Rounded to the nearest 1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>15,999</td>
<td></td>
<td></td>
</tr>
<tr>
<td>28,632</td>
<td></td>
<td></td>
</tr>
<tr>
<td>55,555</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Round within 100,000

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Round 59,996 to the nearest 1,000</th>
<th>Round 59,996 to the nearest 10,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>What do you notice about the answers?</td>
<td>Other examples:</td>
</tr>
<tr>
<td>Can you think of three more numbers where the same thing would happen?</td>
<td>19,721 to the nearest 1,000 and 10,000</td>
</tr>
<tr>
<td></td>
<td>697 to the nearest 10 and 100</td>
</tr>
<tr>
<td></td>
<td>22,982 to the nearest 100 and 1,000</td>
</tr>
</tbody>
</table>

Two five-digit numbers have a difference of 5

When they are both rounded to the nearest thousand, the difference is 1,000

What could the numbers be?

Two numbers with a difference of two where the last three digits are between 495 and 504 e.g. 52,498 and 52,503
Round within a Million

Notes and Guidance

Children use up to 6 digit numbers to recap previous rounding, and learn the new skill of rounding to nearest 100,000.

They look at cases when rounding a number for a purpose, and in certain contexts, goes against the general rules of rounding.

Mathematical Talk

How many digits does a million have?

Partition these numbers. Show me.

Which digits do you need to look at when rounding to the nearest 10? 100? 1000? 10,000? 100,000?

How do you know which is the greatest value? Show me.

Varied Fluency

1. Round these populations to the nearest 100,000

<table>
<thead>
<tr>
<th>City</th>
<th>Population</th>
<th>Rounded to the nearest 100,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leeds</td>
<td>720,492</td>
<td></td>
</tr>
<tr>
<td>Durham</td>
<td>87,599</td>
<td></td>
</tr>
<tr>
<td>Sheffield</td>
<td>512,827</td>
<td></td>
</tr>
<tr>
<td>Birmingham</td>
<td>992,000</td>
<td></td>
</tr>
</tbody>
</table>

2. Round 450,985 to the nearest
   - 10
   - 100
   - 1,000
   - 10,000
   - 100,000

3. At a festival, 218,712 people attend across the weekend.
   Tickets come in batches of 100,000

   How many batches should the organisers buy?
   Explain why this goes against the rounding rule.
Year 5 | Autumn Term

Round within a Million

Reasoning and Problem Solving

The difference between two 3-digit numbers is two.

When each number is rounded to the nearest 1,000 the difference between them is 1,000

What could the two numbers be?

499 and 501
498 and 500

The difference between A and B rounded to the nearest 100 is 700

The difference between B and C rounded to the nearest 100 is 400

A, B and C are not multiples of 10

What could A, B and C be?

A – B = in the range of and including 650 – 749

B has to be greater than 400 to complete
B – C = 400

Possible answer:

A = 1,240
B = 506
C = 59
Children continue to explore negative numbers and their position on a number line. They need to see and use negative numbers in context, and be able to count back through zero.

Do we include zero when counting backwards? Which is the coldest? Warmest? What was the temperature increase? Decrease?

Here are three representations for negative numbers.

What is the same and what is different about each representation?

Estimate and label where 0, -12 and -20 will be on the number line.

Jane visits a zoo.
The rainforest room has a temperature of 32°C
The artic room has a temperature of -24°C
Show the difference in the room temperatures on a number line.
True or False?

- The temperature outside is -5 degrees, the temperature inside is 25 degrees. The difference is 20 degrees.
- Four less than minus six is minus two.
- 15 more than -2 is 13

Explain how you know if each statement is true or false.

False – the difference is 30 degrees because it is 5 degrees from -5 to 0. Added to 25 totals 30

False – it is minus 10 because the steps are going further away from zero

True

Children may use concrete or pictorial resources to explain.

Put these statements in order so that the answers are from smallest to greatest

The difference between -24 and -76

The even number that is less than -18 but greater -22

The number that is half way between 40 and -50

The difference between -6 and 7

52

-20

-5

13

Ordered: -20, -5, 13, 52
Negative Numbers

Notes and Guidance

Children continue their work on negative numbers by counting forwards and backwards through zero.

They extend their learning by finding intervals across zero.

Children need to see negative numbers in context.

Mathematical Talk

Are negative numbers whole numbers?

Why do the numbers on a number line mirror each other from 0?

Why does positive 1 add negative 1 equal 0?

Draw me a picture to show 5 subtract 8

Varied Fluency

1. Use sandcastles (+1) and holes (-1) to calculate.

   \[ = +1 \]

   \[ = -1 \]

   Here is an example.

   \[-2 + 5 = \]

   Two sandcastles will fill two holes.

   There are three sandcastles left to make positive three.

   Use this method to solve:

   - 3 - 6
   - -7 + 8
   - 5 - 9

2. Use the number line to answer the following:

   \[ -5 \quad -4 \quad -3 \quad -2 \quad -1 \quad 0 \quad 1 \quad 2 \quad 3 \quad 4 \quad 5 \]

   - What is 6 less than 4?
   - What is 5 more than -2?
   - What is the difference between 3 and -3?

3. Filip has £17.50 in his bank account. He pays for a jumper costing £30. How much does he have in his bank account now?
A company decided to build offices over ground and underground.

<table>
<thead>
<tr>
<th>Reasoning and Problem Solving</th>
</tr>
</thead>
<tbody>
<tr>
<td>A company decided to build offices over ground and underground.</td>
</tr>
<tr>
<td>Do you agree?</td>
</tr>
<tr>
<td>Explain how you know.</td>
</tr>
<tr>
<td>No, there would be 41 floors because you need to count floor 0</td>
</tr>
<tr>
<td>If we build from 20 to -20, we will have 40 floors.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Negative Numbers</th>
</tr>
</thead>
<tbody>
<tr>
<td>When counting in tens from any single digit, the last number never changes.</td>
</tr>
<tr>
<td>When counting back in tens from any single digit, the last number does change.</td>
</tr>
<tr>
<td>e.g.</td>
