We provide a creative, inclusive and challenging curriculum that inspires future thinkers, innovators and problem solvers.

We deliver our curriculum in an environment that stimulates and supports high quality learning. We aim for all learners to exceed their potential academically, socially, emotionally and spiritually. We work together with families, our local community as well as organisations in the wider world, to ensure that our pupils become ambitious lifelong learners. We ensure that all of our children receive the best education possible and have created a curriculum that involves and engages all.

Our aim is to provide our children with the knowledge, skills and values they need to succeed during their time as a member of our school community and beyond.

We have used the National Curriculum as a base for our curriculum design and have added additional topics and themes to broaden our children's knowledge base and understanding of the changing world we live in.

We use a variety of cross-curricular and discrete subject approaches to ensure that children see links between subjects as well as learning specific skills and knowledge.

Trips, visitors and experiences are used to enhance learning and these are sometimes shared across key stages or year groups. Displays in classrooms and shared areas show clearly what topics are being studied by different year groups and are changed throughout the year.

Our curriculum celebrates how proud we are of our local area and history as well as being outward looking by studying topics beyond our shores and personal experiences. We delve deep into the past to learn about and from those who have lived before us. We explore current affairs and encourage children to be curious and seek answers to questions. At the beginning of new topics, we explore what the children already know and share with them what they will learn. We evaluate at the end of topics to ensure that we have a clear idea of the impact made and information learnt.

Developing problem solving, independence and resilience in pupils is a central to our learning approach. Challenges are set across all curriculum areas and are used to introduce, embed or extend skills. These challenges provide pupils with an opportunity to take ownership of their learning and explore additional information and curriculum areas that excite and interest them.

We encourage families to get involved in projects through homework set, themed days and events, newsletters and trips and through publishing our curriculum guides on our school website.
