Infection Prevention and Control Policy

First approved by Trust Board: July 2020
Review Frequency: Bi-annual

Date of last review: July 2020
Date of next review: July 2022
Important coronavirus (COVID-19) update

This policy has been updated in line with the current guidance from the UK government. We have included an amendment to the policy in Appendix A which provides detailed infection control considerations for the current circumstances. Please have due regard for the stipulations within this amendment for the duration of schools being partially closed. Once pupils return to school full time, schools can refer to the provisions within the main body of this policy.

The DfE coronavirus information can be accessed via: DfE.coronavirushelpline@education.gov.uk

Managing Specific Infectious Diseases
Infection Absence Periods
Diarrhoea and Vomiting Outbreak Action Checklist
List of Notifiable Diseases

Addendum
Infection Control During the Coronavirus Pandemic
Statement of intent

Infections can easily spread in a school due to:

- Pupils’ immature immune systems.
- The close-contact nature of the environment.
- Some pupils having not yet received full vaccinations.
- Pupils’ poor understanding of good hygiene practices.

Infections commonly spread in the following ways:

- Respiratory spread – contact with coughs or other secretions from an infected person.
- Direct contact spread – direct contact with the infecting organism, e.g., skin-on-skin contact during sports.
- Gastrointestinal spread – contact with contaminated food or water, or contact with infected faeces or unwashed hands.
- Blood borne virus spread – contact with infected blood or bodily fluids, e.g., via bites or used needles.

We actively prevent the spread of infection via the following measures:

- Maintaining high standards of personal hygiene and practice
- Maintaining a clean environment
- Routine immunisations
- Taking appropriate action when infection occurs, including additional cleaning routines

This policy aims to help school staff prevent and manage infections in school. It is not intended to be used as a tool for diagnosing disease, but rather a series of procedures informing staff what steps to take to prevent infection and what actions to take when infection occurs.

Signed by

__________________________ Headteacher       Date ______________________

__________________________ Chair of Governors       Date ______________________
Legal framework

This policy has due regard to legislation including, but not limited to, the following:

- Control of Substances Hazardous to Health Regulations 2002 (as amended 2004)
- Health and Safety at Work etc. Act 1974
- The Management of Health and Safety at Work Regulations 1999
- The Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013
- The Health Protection (Notification) Regulations 2010

This policy has due regard to statutory guidance including, but not limited to, the following:

- DfE (2015) ‘Supporting pupils at school with medical conditions’

This policy operates in conjunction with the following school policies and documents:

- Incident Management Plan
- Pandemic Incidents Policy
- Health and Safety Policy
- Supporting Pupils with Medical Conditions Policy
- Administering Medication Policy
- First Aid Policy
- Visit to the Zoo Risk Assessment
- Farm Visit Risk Assessment
- Swimming Risk Assessment
- Sharps Policy
- Disposal of bodily fluid Policy to be implemented

Preventative measures

Ensuring a clean environment

Sanitary facilities

- Wall-mounted soap dispensers are used in all toilets – bar soap is never used.
- Waste paper bin is always made available where disposable paper towels are used.
- Toilet paper is always available in cubicles.
- Suitable sanitary disposal facilities are provided where necessary.

Personal Care changing areas

Pupils are encouraged to clean with disposable wipes where their medical needs require, and lotions are labelled with the relevant pupil’s name

- Handwashing facilities are available in the room and soiled nappies are disposed of inside a wrapped plastic bag and placed in a nappy dispenser.

Continence aid facilities

- Pupils who use continence aids, e.g., continence pads and catheters are encouraged to be as independent as possible. Pads are changed in a designated area with adequate handwashing facilities, and disposable powder-free latex gloves and a disposable plastic apron are worn.
Laundry
- Manual sluicing of clothing is not permitted and gloves and aprons are worn when handling soiled linen or clothing. Hands are thoroughly washed after gloves are removed.

Cleaning contractors/School Cleaners
- Both school employed cleaners and cleaning contractor are employed to carry out rigorous cleaning of the premises. Cleaning equipment is maintained to a high standard and is colour coded according to area of use. The school Site Manager/Caretaker is responsible for monitoring cleaning standards and discussing any issues that may arise with the contractor or addresses issues arising with the school cleaners where appropriate.

Toys and equipment

Handwashing
- All staff and pupils are advised to wash their hands after using the toilet, before eating or handling food, following outdoor activities and after touching animals.
- Sanitiser dispensers are located at various points around the school.

Blood and other bodily fluids
- Cuts and abrasions are covered with waterproof dressings.
- When coughing or sneezing, all staff and pupils are encouraged to cover their nose and mouth with a disposable tissue and dispose of the tissue after use, and to wash their hands afterwards.
- Personal protective equipment (PPE) is worn where there is a risk of contamination with blood or bodily fluids during an activity. Gloves are disposable, non-powdered vinyl or latex (staff to be responsible in advising if they are intolerant to latex) and CE (Conformité Européene) marked. If there is a risk of splashing to the face, goggles are worn.
- All staff receive training in Donning and Doffing of PPE.
- Spillages of blood, faeces, saliva, vomit, nasal and eye discharges are cleaned up immediately. They are cleaned using a mixture of detergent and disinfectant. Paper towels or cloths are used, staff always wearing PPE, and they are disposed of after use. The school spillage kit is stored in the Site Managers room.

Bites
- If a bite does not break the skin, the affected area is cleaned with soap and water.
- If a bite breaks the skin, the affected area is cleaned with soap and running water, the incident is recorded in the pupil accident log and medical advice is sought immediately.

Hypodermic needles (sharps)
- Injuries incurred through sharps found on school grounds will be treated in line with Havering oneSource Guidelines. All sharps found on school premises will be disposed of in the sharps bin wearing PPE.

Pupil immunisation
- The school keeps up-to-date with national and local immunisation scheduling and advice via www.nhs.uk/conditions/vaccinations/.

Whilst the school encourages parents/carers to have their children immunised, parental consent will always be sought before a vaccination is given.

- The school will ensure that any pupils with existing medical conditions are medically cleared to be given the vaccine in question.
- A healthcare team will visit the school in order to carry out vaccinations
- A risk assessment will be conducted by the healthcare team prior to vaccinations
- Before starting school, pupils should be given their 4-in-1 pre-school booster against diphtheria, tetanus, whooping cough and polio, usually at 3 years and 4 months.
• All pupils in Reception to Year 4 will be offered nasal flu vaccinations annually.
• Any pupils who become unwell after receiving a vaccination will be treated by following the school’s procedures for sick and unwell pupils.

Any side effects from the vaccinations, such as becoming unwell, will be reported to the healthcare team who administered the vaccination, allowing them to record the symptoms and the time that the vaccine was administered.

• Regular communication is maintained after pupils return to lessons, as some side effects can take several hours to develop.
• Members of staff will be with pupils before, during and after vaccinations, in order to keep the pupils relaxed and create a calming atmosphere.
• The school will ensure that the venue used is a clean, open, well-ventilated room, where pupils can access water and fresh air.
• Needles are kept away from pupils before and after the vaccine is administered.
• Some vaccinations may involve an exclusion period in which pupils are not required to attend school. The administering healthcare team will provide advice in such cases.

Staff immunisation

Staff are encouraged to remain up-to-date with immunisations; in particular, we encourage the following:

• Hepatitis B: We do not recommend Hepatitis B vaccines for staff in routine contact with infected children; however, where staff are involved with the care of children with severe learning disabilities or challenging behaviour, we encourage immunisation.
• Rubella: Female staff of childbearing age are encouraged to check with their GP that they are immune to the rubella (German measles) virus. If they are not immune, we encourage them to be immunised with the MMR vaccine, except during pregnancy.

Contact with pets and animals

• Visiting animals for the purpose of education in school are only permitted on school trips, or visiting farms to the school, following a risk assessment.
• Visiting animals are always supervised by their handler, following any physical contact, hands will be washed.
• Visits to farms are strictly controlled by the policies and protocols contained in our Farm Visit Risk Assessment.
• Visits to zoos are strictly controlled by use of our Visit to the Zoo Risk Assessment.

Water-based activities

Swimming lessons
• General swimming lessons are governed by the control measures outlined in our Swimming Risk Assessment.
• Pupils who have experienced vomiting or diarrhoea in the week preceding the trip are not permitted to attend public swimming pools.

Other activities
• Alternative water-based activities are only undertaken at reputable centres.
• Children and staff cover all cuts, scratches and abrasions with waterproof dressings before taking part, and hands are washed immediately after the activity. No food or drink is to be consumed until hands have been washed.
• After canoeing or rowing, staff and pupils immediately wash or shower.
• If a member of staff or a pupil becomes ill within three to four weeks of an activity taking place, we encourage them to seek medical advice and inform their GP of their participation in these activities.
In the event of infection

Preventing the spread of infection

Parents/Carers will not bring their child to school in the following circumstances:
- The child shows signs of being poorly and needing one-to-one care
- The child has untreated conjunctivitis
- The child has a high temperature/fever
- The child has untreated head lice
- The child has been vomiting and/or had diarrhoea within the last 48 hours due to illness
- The child has an infection and the minimum recommended exclusion period has not yet passed
- During a pandemic if the child or anyone in the household is experiencing any symptoms linked to the pandemic they must not attend school

Vulnerable pupils
- Pupils with impaired immune defence mechanisms (known as immune-compromised) are more likely to acquire infections. In addition, the effect of an infection is likely to be more significant for such pupils. These pupils may have a disease that compromises their immune system or be undergoing treatment, such as chemotherapy, that has a similar effect.
- Parents/Carers are responsible for notifying the school if their child is “vulnerable”.
- If a vulnerable child is thought to have been exposed to an infectious disease, the child’s parents/carers will be informed and encouraged to seek medical advice from their doctor or specialist.

Vulnerable Staff
- Appropriate action for staff considered at high risk due to personal medical grounds or caring responsibilities will be taken into account on a case by case basis on a local level. This could include changes to working practices to minimise the risk of infection.

Procedures for unwell pupils/staff

Staff are required to know the warning signs of pupils becoming unwell including, but not limited to, the following:
- Not being themselves
- Not having a snack
- Not eating at lunchtimes
- Wanting more attention/sleep than usual
- Displaying physical signs of being unwell, e.g., watery eyes, a flushed face or clammy skin
- Lack of senses for taste or smell
- Any symptoms linked to a current pandemic

Where a staff member identifies a pupil as unwell, the pupil is taken to the medical room near the main reception office, where their temperature will be taken by the first aider, and the pupil’s parents/carers will be informed of the situation.

The First Aider will:
- Follow hand hygiene guidance before donning and following doffing of PPE
- Don appropriate PPE following the PHE guidance for donning and doffing
- Attempt to cool the pupil down if they are too hot, by opening a window and suggesting that the pupil removes their top layers of clothing.
- Provide the pupil with a drink of water.
- Move the pupil to a quieter area of the classroom or school such as the medical room.
- Ensure there is a staff member available to comfort the pupil.
• Summon emergency medical help if required.

Pupils and staff displaying any of the signs of becoming unwell will be sent home, and we will recommend that they see a doctor.

If a pupil is identified with sickness and diarrhoea, the pupil’s parents/carers will be contacted immediately and the child will be sent home, and may only return after 48 hours have passed without symptoms if this was due to illness.

If a staff member is suffering from vomiting and diarrhoea, they will be sent home and may not return until 48 hours have passed without symptoms.

If the school is unable to contact a pupil’s parents/carers in any situation, the pupil’s alternative emergency contacts will be contacted.

**Contaminated clothing**

If the clothing of the first-aider or a pupil becomes contaminated, the clothing is removed as soon as possible and placed in a plastic bag. The pupil’s clothing is sent home with the pupil.

**Exclusion**

- Pupils suffering from infectious diseases will be excluded from school on medical grounds for the *minimum recommended period*.
- Pupils can be formally excluded on medical grounds by the Headteacher.
- If parents/carers insist on their child returning to school when the child still poses a risk to others, following advice from PHE or the HPT, the Trust may serve notice on the child’s parents/carers to require them to keep the child away from school until the child no longer poses a risk of infection.
- If a pupil is exposed to an infectious disease, but is not confirmed to be infected, this is not normally a valid reason for exclusion; however, the local health protection team (HPT) through the Eastern England Health Protection Team via 03003038537 may be contacted to advice on a case-by-case basis.

**Medication**

- Where a pupil has been prescribed medication by a doctor, dentist, nurse or pharmacist, the first dose will be given at home, in case the pupil has an adverse reaction.
- The pupil will only be allowed to return to school 24 hours after the first dose of medication, to allow it time to take effect.
- All medicine provided in school will be administered in line with the Administering Medication Policy.

**Outbreaks of infectious diseases**

In the event of a pandemic we will follow the guidance set out by Public Health England and the DfE and invoke our Incident Management Plan and the Pandemic Incidents Policy.

An incident is classed as an ‘outbreak’ where:

- Two or more people experiencing a similar illness are linked in time or place.
- A greater than expected rate of infection is present compared with the usual background rate, e.g.:
- Two or more pupils in the same classroom are suffering from vomiting and diarrhoea.
- A greater number of pupils than usual are diagnosed with scarlet fever.
- There are two or more cases of measles at the school.

Suspected outbreaks of any of the diseases listed on the [List of Notifiable Diseases](#) will always be reported.
As soon as an outbreak is suspected (even if it cannot be confirmed), the Headteacher will contact the HPT by calling: 03003038537 Eastern England Health Protection Team to discuss the situation and agree if any actions are needed.

The Headteacher will provide the following information:

- The number of staff and children affected
- The symptoms present
- The date(s) the symptoms first appeared
- The number of classes affected

If the Headteacher is unsure whether suspected cases of infectious diseases constitute an outbreak, they will contact the HPT by calling: 03003038537 Eastern England Health Protection Team

- The HPT will provide the school with draft letters and factsheets to distribute to parents/carers.
- The HPT will always treat outbreaks in the strictest confidence; therefore, information provided to parents during an outbreak will never include names and other personal details.
- If a member of staff suspects the presence of an infectious disease in the school, they will contact the Local Health Protection Team for further advice.
- If a parent/carer informs the school that their child carries an infectious disease, other pupils will be observed for similar symptoms by their teachers.
- If a pupil is identified as having a notifiable disease, as outlined in the guide to Infection Absence Periods, the school will inform the parents/carers, who should inform their child’s GP. It is a statutory requirement for doctors to then notify their local Public Health England centre.

During an outbreak, enhanced cleaning protocols will be undertaken, following advice provided by the local HPT. The Site Manager/Caretaker will liaise with the cleaning contractor to ensure these take place.

**Pregnant staff members**

If a pregnant staff member develops a rash, or is in direct contact with someone who has a potentially contagious rash, we will strongly encourage her to speak to her doctor or midwife.

**Chickenpox**

If a pregnant staff member has not already had chickenpox or shingles, becoming infected can affect the pregnancy. If a pregnant staff member believes they have been exposed to chickenpox or shingles and have not had either infection previously, she will speak to her midwife or GP as soon as possible. If a pregnant staff member is unsure whether they are immune, we encourage them to take a blood test.

**Measles**

If a pregnant staff member is exposed to measles, she will inform her midwife immediately.

**Rubella (German measles)**

If a pregnant staff member is exposed to rubella, she will inform her midwife immediately.

**Slapped cheek disease (Parvovirus B19)**

If a pregnant staff member is exposed to slapped cheek disease, she will inform her midwife promptly.

**Staff handling food**
Food handling staff suffering from transmittable diseases will be excluded from all food handling activity until advised by the Catering Company serving the school that they are clear to return to work. Both food handling staff and midday assistants are not permitted to attend work if they are suffering from diarrhoea and/or vomiting. They are not permitted to return to work until 48 hours have passed since diarrhoea and/or vomiting occurred.

Food handlers are required by law to inform the school if they are suffering from any of the following:

- Typhoid fever
- Paratyphoid fever
- Other salmonella infections
- Dysentery
- Shigellosis
- Diarrhoea (where the cause of which has not been established)
- Infective jaundice
- Staphylococcal infections likely to cause food poisoning like impetigo, septic skin lesions, exposed infected wounds, boils
- E. coli VTEC infection

Managing specific infectious diseases

When an infectious disease occurs in the school, we will follow the appropriate procedures set out in the Managing Specific Infectious Diseases appendix.

Monitoring and review

All members of staff are required to familiarise themselves with this policy as part of their induction programme.

The Headteacher will review this policy on an annual basis and will make any changes necessary, taking into account the current effectiveness of infection control and prevention.

The next scheduled review date is August 2020.
## Managing Specific Infectious Diseases

<table>
<thead>
<tr>
<th>Disease</th>
<th>Symptoms</th>
<th>Considerations</th>
<th>Exclusion period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Athlete’s foot</td>
<td>Scaling or cracking of the skin, particularly between the toes, or blisters containing fluid. The infection may be itchy.</td>
<td>Cases are advised to see their GP for advice and treatment.</td>
<td>Exclusion is not necessary.</td>
</tr>
<tr>
<td>Chicken pox</td>
<td>Sudden onset of fever with a runny nose, cough and generalised rash. The rash then blisters and scabs over. Several blisters may develop at once, so there may be scabs in various stages of development. Some mild infections may not present symptoms.</td>
<td>Cases are advised to consult their GP.</td>
<td>Chickenpox is infectious from 48 hours prior to a rash appearing up to five days after the onset of a rash. Cases will be excluded from school for five days from the onset of a rash. It is not necessary for all the spots to have healed before the case returns to school.</td>
</tr>
<tr>
<td>Cold sores</td>
<td>The first signs of cold sores are tingling, burning or itching in the affected area. Around 24 hours after the first signs appear the area will redden and swell, resulting in a fluid-filled blister. After blistering, they break down to form ulcers then dry up and crust over.</td>
<td>Cases are advised not to touch the cold sore, or to break or pick the blisters. Sufferers of cold sores should avoid kissing people and should not share items such as cups, towels and facecloths.</td>
<td>Exclusion is not necessary.</td>
</tr>
<tr>
<td>Conjunctivitis</td>
<td>The eye(s) become reddened and swollen, and there may be a yellow or green discharge. Eyes may feel itchy and ‘gritty’.</td>
<td>Cases are encouraged to seek advice, wash their hands frequently and not to rub their eyes. The HPT will be contacted if an outbreak occurs.</td>
<td>Exclusion is not necessary.</td>
</tr>
<tr>
<td>Coronavirus</td>
<td>A new, continuous cough and a high temperature or a loss or change to your sense of smell or taste are the main symptoms of coronavirus. Most people with Coronavirus have at least one of these symptoms.</td>
<td>Cases will be sent home and advised to contact 111 for advice, or 999 if they become seriously ill or believe their life is at risk. The local HPT will be contacted if an outbreak occurs.</td>
<td>Cases will be required to self-isolate at home for 7 days if they live alone, or 14 days if they live with others.</td>
</tr>
<tr>
<td>Food poisoning</td>
<td>Symptoms normally appear within one to two days of contaminated food being consumed, although they may start at any point between a few hours and</td>
<td>Cases will be sent home.</td>
<td>Cases will be excluded until 48 hours have passed since symptoms were present.</td>
</tr>
<tr>

<table>
<thead>
<tr>
<th>Disease</th>
<th>Symptoms</th>
<th>Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gastroenteritis</td>
<td>Symptoms include three or more liquid or semi-liquid stools in a 24-hour period.</td>
<td>The HPT will be contacted where there are more cases than usual.</td>
</tr>
<tr>
<td>Bacillary dysentery (Shigella)</td>
<td>Symptoms include bloody diarrhoea, vomiting, abdominal pain and fever. It lasts four to seven days on average, but potentially several weeks.</td>
<td>The school will contact the HPT.</td>
</tr>
<tr>
<td>Campylobacter</td>
<td>Symptoms include diarrhoea, headache, fever and, in some cases, vomiting.</td>
<td>Cases will be excluded until 48 hours have passed since symptoms were present.</td>
</tr>
<tr>
<td>Cryptosporidiosis</td>
<td>Symptoms include abdominal pain, diarrhoea and occasional vomiting.</td>
<td>Cases will be excluded until 48 hours have passed since symptoms were present.</td>
</tr>
<tr>
<td>Glandular fever</td>
<td>Symptoms include severe tiredness, aching muscles, sore throat, fever, swollen glands and occasionally jaundice.</td>
<td>The sufferer may feel unwell for several months and the school will provide reasonable adjustments where necessary.</td>
</tr>
<tr>
<td>Hand, foot and mouth disease</td>
<td>Symptoms include a fever, reduced appetite and generally feeling unwell. One or two days later, a rash with blisters will develop on cheeks, hands and feet. Not all cases will have symptoms.</td>
<td>Exclusion is not necessary, and cases can return to school as soon as they feel well.</td>
</tr>
<tr>
<td>Head lice</td>
<td>Other than the detection of live lice or nits, there are no immediate symptoms until two to three weeks after infection, where itching and scratching of the scalp occurs.</td>
<td>Treatment is only necessary when live lice are seen. Staff are not permitted to inspect any pupil’s hair for head lice.</td>
</tr>
</tbody>
</table>

Exclusion period:
The HPT will be consulted in all cases.
Cases will be excluded until 48 hours have passed since symptoms were present.
If medication is prescribed, the full course must be completed and there must be no further symptoms displayed for 48 hours following completion of the course before the cases may return to school.
Cases will be excluded from swimming for two weeks following their last episode of diarrhoea.
Microbiological clearance is required for some types of shigella. The HPT will advise.
Exclusion is not necessary, and cases can return to school as soon as they feel well.
Exclusion is not necessary.

<tr>
<td>Meningitis (viral)</td>
<td>Symptoms include headache, fever, gastrointestinal or upper respiratory tract involvement and, in some cases, a rash.</td>
<td>The case will be encouraged to consult their GP.</td>
<td>No exclusion is required.</td>
</tr>
<tr>
<td>Meticillin resistant staphylococcus aureus (MRSA)</td>
<td>Symptoms are rare but include skin infections and boils.</td>
<td>All infected wounds will be covered.</td>
<td>No exclusion is required.</td>
</tr>
<tr>
<td>Mumps</td>
<td>Symptoms include a raised temperature and general malaise. Then, stiffness or pain in the jaws and neck is common. Following this, the glands in the cheeks and under the jaw swell up and cause pain (this can be on one or both sides). Mumps may also cause swelling of the testicles.</td>
<td>The case will be encouraged to consult their GP.</td>
<td>Cases can return to school five days after the onset of swelling if they feel able to do so.</td>
</tr>
<tr>
<td>Ringworm</td>
<td>Symptoms vary depending on the area of the body affected.</td>
<td>Pupils with ringworm of the feet will wear socks and trainers at all times and cover their feet during physical education.</td>
<td>No exclusion is usually necessary.</td>
</tr>
<tr>
<td>Rotavirus</td>
<td>Symptoms include severe diarrhoea, stomach cramps, vomiting, dehydration and mild fever.</td>
<td>Cases will be sent home if unwell and encouraged to speak to their GP.</td>
<td>For infections of the skin and scalp, cases can return to school once they have received treatment.</td>
</tr>
</tbody>
</table>

The HPT and school health advisor will be notified of a case of meningococcal disease in the school. The HPT will conduct a risk assessment and organise antibiotics for household and close contacts.

The HPT will be notified if two cases of meningococcal disease occur in the school within four weeks.

Exclusion is not necessary for household or close contacts unless they have symptoms suggestive of meningococcal infection.

<tr>
<td>Rubella (German Measles)</td>
<td>Symptoms are usually mild, with a rash being the first indication. There may also be mild catarrh, headaches or vomiting. There may be a slight fever and some tenderness in the neck, armpits or groin, and there may be joint pains.</td>
<td>MMR vaccines are promoted to all pupils.</td>
<td>Cases will be excluded for six days from the appearance of the rash.</td>
</tr>
<tr>
<td>Scabies</td>
<td>Symptoms include tiny pimples and nodules on a rash, with burrows commonly seen on the wrists, palms, elbows, genitalia and buttocks.</td>
<td>All household contacts and any other very close contacts should have one treatment at the same time as the second treatment of the case. The second treatment must not be missed and should be carried out one week after the first treatment.</td>
<td>Cases will be excluded until after the first treatment has been carried out.</td>
</tr>
<tr>
<td>Scarlet Fever</td>
<td>Symptoms include acute inflammation of the pharynx or tonsils, with tonsils reddening in colour and becoming partially covered with a thick, yellowish exudate. In severe cases, there may be a high fever, difficulty swallowing and tender, enlarged lymph nodes. A rash develops on the first day of fever and is red, generalised, pinhead in size and gives the skin a sandpaper-like texture, with the tongue developing a strawberry-like appearance.</td>
<td>Antibiotic treatment is recommended, as a person is infectious for two to three weeks if antibiotics are not administered. If two or more cases occur, the HPT will be contacted.</td>
<td>Cases are excluded for 24 hours following appropriate antibiotic treatment.</td>
</tr>
<tr>
<td>Slapped cheek syndrome, Parvovirus B19, Fifth’s Disease</td>
<td>Where symptoms develop, they include a rose-red rash making the cheeks appear bright red.</td>
<td>Cases will be encouraged to visit their GP.</td>
<td>Exclusion is not required.</td>
</tr>
<tr>
<td>Threadworm</td>
<td>Symptoms include itching around the anus, particularly at night.</td>
<td>Cases will be encouraged to visit their GP.</td>
<td>Exclusion is not required.</td>
</tr>
<tr>
<td>Tuberculosis (TB)</td>
<td>Symptoms include cough, loss of appetite, weight loss, fever, sweating (particularly at night), breathlessness and pains in the chest. TB in parts of the body other</td>
<td>Advice will be sought from the HPT before taking any action, and regarding exclusion periods.</td>
<td>Cases with infectious TB can return to school after two weeks of treatment if well enough to do so, and as long as they have responded to anti-TB therapy.</td>
</tr>

<td></td>
<td>than the lungs may produce a painful lump or swelling.</td>
<td></td>
<td>Cases with non-pulmonary TB, and cases with pulmonary TB who have effectively completed two weeks of treatment as confirmed by TB nurses, will not be excluded.</td>
</tr>
<tr>
<td>Whooping cough (pertussis)</td>
<td>Symptoms include a heavy cold with a persistent cough. The cough generally worsens and develops the characteristic ‘whoop’. Coughing spasms may be worse at night and may be associated with vomiting.</td>
<td>Cases will be advised to see their GP. Parents are advised to have their children immunised against whooping cough.</td>
<td>Cases will not return to school until they have had 48 hours of appropriate treatment with antibiotics and feel well enough to do so, or 21 days from the onset of illness if no antibiotic treatment is given. Cases will be allowed to return in the above circumstances, even if they are still coughing.</td>
</tr>

</table>
**Infection Absence Periods**

This table details the minimum required period for staff and pupils to stay away from school following an infection, as recommended by Public Health England.

*Identifies a notifiable disease. It is a statutory requirement that doctors report these diseases to their local Public Health England centre.

<table>
<thead>
<tr>
<th>Infection</th>
<th>Recommended minimum period to stay away from school</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Athlete’s foot</td>
<td>None</td>
<td>Treatment is recommended; however, this is not a serious condition.</td>
</tr>
<tr>
<td>Chicken pox</td>
<td>Until all vesicles have crusted over</td>
<td>Follow procedures for vulnerable children and pregnant staff.</td>
</tr>
<tr>
<td>Cold sores</td>
<td>None</td>
<td>Avoid contact with the sores.</td>
</tr>
<tr>
<td>Conjunctivitis</td>
<td>None</td>
<td>If an outbreak occurs, consult the HPT.</td>
</tr>
<tr>
<td>[New] Coronavirus</td>
<td>Until fully recovered and no other member of the same household is presenting symptoms (7 days if living alone, 14 days if living with others)</td>
<td>If coronavirus is suspected, consult the local HPT.</td>
</tr>
<tr>
<td>Diarrhoea and/or vomiting</td>
<td>Whilst symptomatic and 48 hours from the last episode</td>
<td>GPs should be contacted if diarrhoea or vomiting occur after taking part in water-based activities.</td>
</tr>
<tr>
<td>Diphtheria*</td>
<td>Exclusion is essential.</td>
<td>Family contacts must be excluded until cleared by the HPT and the HPT must always be consulted.</td>
</tr>
<tr>
<td>Flu (influenza)</td>
<td>Until recovered</td>
<td>Report outbreaks to the HPT.</td>
</tr>
<tr>
<td>Infection</td>
<td>Recommended minimum period to stay away from school</td>
<td>Comments</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>-----------------------------------------------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Glandular fever</td>
<td>None</td>
<td></td>
</tr>
<tr>
<td>Hand foot and mouth</td>
<td>None</td>
<td>Contact the HPT if a large number of children are affected. Exclusion may be considered in some circumstances.</td>
</tr>
<tr>
<td>Head lice</td>
<td>None</td>
<td>Treatment recommended only when live lice seen.</td>
</tr>
<tr>
<td>Hepatitis A*</td>
<td>Seven days after onset of jaundice or other symptoms</td>
<td>If it is an outbreak, the HPT will advise on control measures.</td>
</tr>
<tr>
<td>Hepatitis B*, C* and HIV</td>
<td>None</td>
<td>Not infectious through casual contact. Procedures for bodily fluid spills must be followed.</td>
</tr>
<tr>
<td>Impetigo</td>
<td>48 hours after commencing antibiotic treatment, or when lesions are crusted and healed</td>
<td>Antibiotic treatment is recommended to speed healing and reduce the infectious period.</td>
</tr>
<tr>
<td>Measles*</td>
<td>Four days from onset of rash</td>
<td>Preventable by vaccination (MMR). Follow procedures for vulnerable children and pregnant staff.</td>
</tr>
<tr>
<td>Meningococcal meningitis*/ septicaemia*</td>
<td>Until recovered</td>
<td>Meningitis ACWY and B are preventable by vaccination. The HPT will advise on any action needed.</td>
</tr>
<tr>
<td>Meningitis* due to other bacteria</td>
<td>Until recovered</td>
<td>Hib and pneumococcal meningitis are preventable by vaccination. The HPT will advise on any action needed.</td>
</tr>
<tr>
<td>Infection</td>
<td>Recommended minimum period to stay away from school</td>
<td>Comments</td>
</tr>
<tr>
<td>----------------------------</td>
<td>----------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Meningitis viral*</td>
<td>None</td>
<td>As this is a milder form of meningitis, there is no reason to exclude those who have been in close contact with infected persons.</td>
</tr>
<tr>
<td>MRSA</td>
<td>None</td>
<td>Good hygiene, in particular environmental cleaning and handwashing, is important to minimise the spread. The local HPT should be consulted.</td>
</tr>
<tr>
<td>Mumps*</td>
<td>Five days after onset of swelling</td>
<td>Preventable by vaccination with two doses of MMR.</td>
</tr>
<tr>
<td>Ringworm</td>
<td>Exclusion is not usually required</td>
<td>Treatment is required.</td>
</tr>
<tr>
<td>Rubella (German measles)</td>
<td>Four days from onset of rash</td>
<td>Preventable by two doses of immunisation (MMR). Follow procedures for pregnant staff.</td>
</tr>
<tr>
<td>Scarlet fever</td>
<td>24 hours after commencing antibiotic treatment</td>
<td>Antibiotic treatment is recommended, as a person is infectious for two to three weeks if antibiotics are not administered. If two or more cases occur, the HPT should be contacted.</td>
</tr>
<tr>
<td>Scabies</td>
<td>Can return to school after first treatment</td>
<td>The infected person’s household and those who have been in close contact will also require treatment.</td>
</tr>
<tr>
<td>Slapped cheek/Fifth disease/Parvo Virus B19</td>
<td>None (once rash has developed)</td>
<td>Follow procedures for vulnerable children and pregnant staff.</td>
</tr>
<tr>
<td>Threadworms</td>
<td>None</td>
<td>Treatment recommended for the infected person and household contacts.</td>
</tr>
<tr>
<td>Tonsillitis</td>
<td>None</td>
<td>There are many causes, but most causes are virus-based and do not require antibiotics.</td>
</tr>
<tr>
<td>Tuberculosis (TB)</td>
<td>Pupils with infectious TB can return to school after two weeks of treatment if well enough to do so, and as long as they have responded to anti-TB therapy.</td>
<td>Only pulmonary (lung) TB is infectious. It requires prolonged close contact to spread. Cases with non-pulmonary TB, and cases with pulmonary TB who have effectively completed two weeks of treatment as confirmed by TB nurses, should not be excluded. Consult the local HPT before disseminating information to staff and parents.</td>
</tr>
<tr>
<td>Infection</td>
<td>Recommended minimum period to stay away from school</td>

List of Notifiable Diseases

Under the Health Protection (Notification) Regulations 2010, the following diseases will always be reported to the health protection team (HPT):

- Acute encephalitis
- Acute meningitis
- Acute poliomyelitis
- Acute infectious hepatitis
- Anthrax
- Botulism
- Brucellosis
- Cholera
- COVID-19
- Diphtheria
- Enteric fever (typhoid or paratyphoid fever)
- Food poisoning
- Haemolytic uraemic syndrome (HUS)
- Infectious bloody diarrhoea
- Invasive group A streptococcal disease and scarlet fever
- Legionnaires’ disease
- Leprosy
- Malaria
- Measles
- Meningococcal septicaemia
- Mumps
- Plague
- Rabies
- Rubella
- SARS
- Smallpox
- Tetanus
- Tuberculosis
- Typhus
- Viral haemorrhagic fever (VHF)
- Whooping cough
- Yellow fever
Addendum
Infection Control during the Coronavirus Pandemic

Statement of intent
We understand that we face a time of great uncertainty and, as a school, we are doing all we can to provide clarity and safety for the school community. This appendix includes provisions which the school will have due regard for during the coronavirus pandemic. The information in this section is under constant review and is updated to reflect changes to government guidance as it is released.

Legal framework
This policy has due regard to all relevant legislation and statutory guidance including, but not limited to, the following:

Social distancing measures
The school will adhere to the government’s social distancing guidelines as much as is possible. To ensure the risk of virus spread for both staff and pupils still in school is as low as possible, the following action will be taken:

- Pupils, parents, carers and any visitors will be told not to enter the building if they are displaying symptoms of coronavirus.
- The way pupils arrive at school will be reviewed, with a view to reducing the number of people coming through any given entrance in to school.
- Class sizes will be reduced and based on the number of teaching staff available.
- Pupils will be sat at desks that are two metres apart and will be required to sit in the same seats every day.
- Break and lunch times and the movement of pupils around the school will be staggered to prevent large groups of pupils from gathering.
- At lunchtime both pupils and staff will be asked to queue for meals and sit at tables whilst maintaining a two-metre distance at all times.
- Pupils will be asked to visit the toilet one after the other.
- Staff will endeavour to ensure pupils keep a safe distance whilst in the playground or taking part in physical exercise.
- All unnecessary staff gatherings will be avoided, e.g. where possible, meetings will take place via video conference from different classrooms or offices.
- Parents/Carers will be discouraged from gathering at school gates. Floor markings will be placed in pick up areas to ensure parents/carers maintain a two-metre distance from one another.
- The main office will be closed to all parent/carers, any enquiry will need to be via telephone or email. The exception to this will be in the case of an ill child being collected from school.
- Families collecting FSM will be asked to adhere to the school’s social distancing measures.
- Staff will consider using age and developmentally appropriate ways to encourage children to follow social distancing, handwashing and other guidance, e.g. through games, songs and stories.
Additional hygiene and cleaning measures
Anyone who feels unwell will be told to stay at home for 7 days if they live alone, or 14 days if they live with others.

All staff and pupils will be:
- Told to frequently wash their hands with soap and water for 20 seconds.
- Encouraged not to touch their faces.
- Told to use a tissue or their elbow to catch coughs or sneezes and use bins for tissue waste.
- Pupils who have difficulty washing their hands will be supported by a member of staff.
- Staff will ensure thorough handwashing before and after supporting children who need help with, going to the toilet or eating.
- Sharing food, drink, utensils, equipment and soft toys will be avoided as much as possible. Equipment, toys and surfaces will be cleaned and disinfected daily.
- The frequency of cleaning will increase, particularly for surfaces in classrooms, within toilet blocks and in changing rooms, in accordance with PHE’s ‘COVID-19: cleaning of non-healthcare settings’ guidance
- Equipment, including keyboards, tables, chairs, door handles, light switches and bannisters, will be cleaned and disinfected regularly.

Preventing the further spread of infection

- If anyone becomes unwell with the symptoms of coronavirus, they will be sent home and advised to follow PHE’s ‘COVID-19: guidance for households with possible coronavirus infection’.
- If a pupil is awaiting collection, they will be moved to a room where they can be isolated behind a closed door and receive adult supervision, if required. Where possible, a window will be opened for ventilation.
- Where isolation is not possible, the pupil will be moved to an area which is at least two metres from anyone else.
- If the pupil needs to use the toilet whilst waiting to go home, they will be required to use a separate bathroom. This bathroom will be cleaned and disinfected using standard cleaning products before anyone else uses it.
- If a member of staff has helped someone who is unwell with coronavirus symptoms, they will not be sent home unless they develop symptoms themselves.
- Staff must wash their hands thoroughly for 20 seconds following any contact with someone who is unwell.
- When cleaning an area where a person with possible or confirmed coronavirus has been, staff will use disposable gloves and an apron. Staff will wash their hands with soap and water for 20 seconds after all PPE has been removed.
- If there is visible contamination to an area, e.g. with bodily fluids, cleaning staff will use additional PPE to protect their eyes, mouth and nose.
- Areas where a symptomatic individual has passed through and spent minimal time, e.g. corridors, but which are not visibly contaminated with bodily fluids, will be cleaned thoroughly with normal cleaning products.
- All surfaces that a symptomatic person has come into contact with will be cleaned and disinfected, including objects which are visibly contaminated and those which are potentially contaminated, e.g. door handles.
- Disposable cloths or paper rolls and disposable mop heads will be used to clean all hard surfaces, floors, chairs, door handles and sanitary fittings, using one of the following options:
- A combined detergent disinfectant solution at a dilution of 1,000 parts per million available chlorine
- A household detergent followed by disinfection (1000 ppm av.cl), following the manufacturer’s instructions for dilution, application and contact times
- An alternative disinfectant which is checked to ensure it is effective against enveloped viruses
- Cleaning staff will be asked to:
  - Avoid creating splashes and spray when cleaning.
  - Dispose of any cloths and mop heads used, by putting them into waste bags.
  - Steam clean items that cannot be cleaned using detergents, e.g. upholstered furniture.
  - Dispose of items that are heavily contaminated with body fluids and cannot be cleaned by washing.
  - Waste from possible cases and the cleaning of potentially infected areas will be put into a plastic rubbish bag which will be tied when full. The plastic bag will then be placed into a second tied bin bag, put in a suitable and secure place, and marked for storage until the individual’s test results are known.

**Communication with parents/carers**
The school will inform parents/carers about the measures being taken and request they provide support with implementation, e.g. by encouraging measures to continue at home.

**Pupils with SEND**
The school will work with the LA and parents/carers to decide how best to continue supporting pupils with EHC plans whilst ensuring they stay healthy and safe.
Some pupils with SEND or complex needs may be unable to follow social distancing guidelines. In these circumstances, staff will increase their level of self-protection by minimising close contact (where appropriate), cleaning frequently touched surfaces, and carrying out more frequent handwashing.

**Monitoring and review**
The Headteacher is responsible for continually monitoring PHE and DfE updates and updating this appendix in line with any changes to government guidance.
Any changes to this appendix will be communicated to all staff, parents/carers and relevant stakeholders.
